

# Your Copper Pipes

## Could Cost You THOUSANDS.

In most every home in the area, the copper pipes under and through your foundation are rapidly deteriorating. Copper pipes are wear out tems in your home. So, it's just a matter of time before your water delivery system(Copper Pipes) fails. That failure could cost you thousands. Your copper pipes springing a leak could also cause you to get "Black-listed" with home owners insurance companies.

We had a water line that was leaking under our pool slab. Midway Plumbing rebuilt the water line under the slab using their pipe relining system. They didn't have to tear out the concrete to get the line fixed which saved us a lot of extra time, money and hassle. Their crew was so nice they even mapped out the entire piping system of the pool for future reference. I would definately use Midway again. Jim Fitzhugh , Abilene

Increased demand for water has created changes to the water chemistry coming from the water treatment plant. Water has become increasingly aggressive to copper water piping. The water itself is simply destroying the copper pipes that were once thought to be good for the lifetime of the home.

In the past, the only way to get to even the smallest leak in a copper water pipe was to jackhammer through the foundation of your home then dig down to the break, no matter what you had to destroy to get there. When a plumber finally got to the leak, the only thing to do was patch the leak. But the leak is only a symptom of a failing system. There is a better way and the Midway Plumbing Man can prove it. In fact, Midway Plumbing can prevent your copper pipes from failing by the application of corrosive barrier known as in place pipe restoration. Midway will simply build new pipes inside your existing pipes. This process has been used by water departments for decades to prevent corrosion.

One simple call to Midway Plumbing can start the process of either stopping an existing water leak in your copper piping system or preventing a leak from occurring.

The process is simple. In fact, we will deliver a DVD to your home that will explain how the process works. Or you can go to [www.midwayplumb.com](http://www.midwayplumb.com) and watch the video there. Believe me, simply relining your pipes is by far the easiest way to effectively prevent water leak problems for the next 50 years. Plus Midway Plumbing offers 100% satisfaction guarantee.

Call or go online today and learn for yourself how much a piece of mind you will gain by taking action today.
